

Specialised exhibition AGROSPHERE.

The specialized exhibition **AGROSPHERE** took place on November 27-29, 2014 at the exhibition center of Odessa sea port. The sponsors of the exhibition were the Ministry of Agrarian Policy and Food of Ukraine, Odessa Regional State Administration and Ukrainian Chamber of Commerce and Industry.

Within the frames of the exhibition the following sectors were presented:

- Production and processing of grains and oilseeds.
- Production of feeds.
- Agricultural science and education.
- Agricultural machinery.
- Agro industrial construction.

The employees of Amiranda Ltd were especially interested in methods of organic agriculture and natural soil fertility improvement. Our attention was attracted by the exhibits of the stand **Farm of worms**.

The information presented at the stand showed the use of special type of earthworms when processing of organic manure from livestock and poultry can provide farms with highly effective organic fertilizers which they will produce themselves. That could significantly reduce the cost of removal and disposal of such waste.

More details concerning the Farm of worms you can see following the links:
